Museum Takes On Time-Life Project

Time-Life Books has asked Founding President Gwen Bell and new Exhibits Developer Greg Welch to help compile a comprehensive time-line for the master index volume of its 24-volume set of books, *Understanding Computers*. The time-line of topics and events will run for the length of the last volume.

A valuable research tool for the history of computing, the time-line dovetails with Welch's development of the Museum's new "Milestones of Computing" exhibit. Complete with references, it will also provide the Museum with a basis for an ongoing master time-line database.

UNDERSTANDING COMPUTERS — TIME-LIFE BOOKS

Revolution in Science
The Military Frontier
The Human Body
Input/Output
Transportation
Robotics
The Computerized Society
Computers and the Cosmos
The Personal Computer
Alternative Computers
Space
The Chipmakers
Computer Basics
Memory and Storage
Computer Languages
Communications
Illustrated Chronology and Index
Software
Computer Images
The Puzzle Master
Computer Security
Speed and Power
Artificial Intelligence
The Software Challenge
