Dear Oliver:

Mr. Erwin Tomash and I will be in Boston on business the 12th of November and would very much like to attend your opening. I would appreciate it if you would send me the details as to time and place.

We both look forward to seeing you again.

Very truly yours,

John W. Leggat, III
Group Vice President,
Printer Marketing

Dear Dr. Strimpel:

I have received your letter dated May 18 and have initiated action requesting that a BP-1500 printer be shipped to you as soon as possible.

Measures are being taken to identify a method by which you will be able to obtain a printed representation of the Boston skyline, and to provide you with an interactive system for color graphics output.

I am enclosing color print samples taken from our P-Series printers. Appropriate canned programs are available for your use.

I will keep you apprised of our progress and invite you to call should you need further assistance.

Respectfully,

DATAPRODUCTS CORPORATION

Dick Pelletier

Dear Mr Pelletier

Further to our recent telephone conversation, I am writing to give you a specific list of the Computer Museum's needs for printers.

As part of the major exhibit entitled The Computer and the Image we would like to display a printer reproducing a version of the view out of the gallery window. This is a view of downtown Boston. The present plan is to digitise the scene and then print it out on demand. A printer with a graphics capability would be desirable, such as the M-100 or P-132. Ruggedness and extreme reliability would be an advantage as we expect to be operating about ten hours a day, five days a week. Another desirable feature would be the ability to expose some of the printer's action to the visitor. Might it be possible to replace some panels with transparent plexi or glass?

Secondly, we need a high-speed printer for our office, research and archiving needs. Accounts, artifact lists and research reports and surveys would be among the items printed. This printer would be connected to the Museum's VAX 750. The Dataproducts BP-1500 would be ideal in this context.

We are planning a personal computer exhibit in which a range of PC's will be interacting with visitors on various subjects and with a range of input-output modes such as voice, touch and pictorial. We would like to use a small matrix printer capable of colour graphics with one of the PC's. Would it be appropriate to use one of your P series printers here?

Thank you for your interest and support. I look forward to your response and to any display ideas you and your colleagues might have.

Yours sincerely

Dr Oliver Strimpel

Dear Mr. Strimpel:

Mr. Erwin Tomash referred your letter of February 6, 1984 to me in which you request the donation of a printer to be used in an exhibition in The Computer Museum.

We are interested in helping you. In order for us to accommodate your request, we need to know specifically the type of printer required. If you could provide me with additional information relative to the computer system that the printer will be attached to and any other associated hardware in the system, I will then have a technical representative from one of our Boston offices contact you to establish specific requirements for the printer. You may contact me by telephone at (818) 887-8696.

Sincerely,

Gary D. Bernard
Vice President, Human Resources

Dear Dr. Strimpel:

I have read your letter of February 6, 1984 with interest and have referred it to the Corporate Contributions Committee here at Dataproducts.

I cannot speak for the Committee, but I feel certain that your request will receive careful consideration. Dataproducts is already a supporter of both the Computer Museum and the Charles Babbage Institute, and I plan to convey to them my personal conviction that your project is worthy of support in the context of your commitment to computer history.

Very truly yours,

Erwin Tomash
Chairman, Executive Committee

Dear Mr Tomash

As you may already know, I am on special leave from the Science Museum, London for a year to help the Computer Museum get installed in the new downtown Boston site. My specific project is to set up a gallery by the end of the year on The Computer and the Image. I enclose an outline proposal for the exhibit.

I would like to show the public how printers can be used to make images. One idea is to print out the same image, such as the Mona Lisa, several times in succession at different spatial resolutions, ranging from the maximum of one character per pixel to a minimum of about fifty characters per pixel. It is always best in a demonstration of this kind to have the printer actually working before your eyes, perhaps at the push of a button. Do you think there is a chance the Dataproducts might donate a printer for this purpose?

We hope to have quite a bit of hardware in the gallery: NYIT will lend us a paint system and HP is giving us a plotter. We are contacting many companies for help, ranging from the engineering company one block away, to GE at Lynn and Tektronix in Oregon. The response has been very positive.

Please do not hesitate to contact me should you require any further information or have any comments. The new address is: The Computer Museum, Museum Wharf, 300 Congress Street, Boston, MA 02210, telephone 617-426-7190.

Yours sincerely

Oliver Strimpel
Curator
